DEVELOPMENT & INFRASTRUCTURE SERVICES REPORT ENGINEERING SERVICES INFORMATION REPORT 2015-41

- TO: Mayor and Members of Council
- COPY: Bob Shelton, P.Eng., CAO Members of OLT and SLT
- SUBJECT: Old Town Hall Project Update
- ORIGIN: Engineering Services

PREAMBLE

In accordance with the Procedure By-Law, any Member of Council may request this Information Report be placed on an upcoming Committee of the Whole or Council agenda for discussion.

PURPOSE OF PROJECT REPORT

The purpose of this Project Report is to provide an update on the key activities/milestones affecting the project scope, schedule and cost for the Old Town Hall renovation and construction activities.

EXECUTIVE SUMMARY

• Activities in July & August 2015: Curtain wall installation continues and elevator installation has commenced. Hard landscaping is underway; east laneway concrete curbs and planters have been poured and south podium concrete pours are underway.

• Compass Construction Resources Ltd. (CCRL) is reporting a delay of plus or minus12 weeks from the July 31st substantial performance date to complete the balance of the Project.

• Compass is reporting an anticipated Substantial Performance date in the mid to late fall. Further information regarding the current schedule is in Appendices E and F.

SUMMARY OF CONSTRUCTION ACTIVITY - JULY 2015

Existing Building:

- Mechanical and electrical services are ongoing
- Interior drywall and taping continues

New Addition:

- Curtain wall installation is underway
- Roofing is complete
- Elevator installation is underway
- Landscaping has begun in the east laneway
- · Concrete curbs and planters have been poured
- South entrance podium concrete pours have begun

Schedule Mitigation:

- CCRL continue to report an anticipated Substantial Performance date in the fall of 2015.
- As per the latest construction schedule, CCRL is aiming to complete interior construction works by September 30, 2015, so that the Town may begin Operational and Transition Readiness activities prior to Substantial Performance later in the fall. The exterior aluminum panel cladding will still be outstanding at that time.
- As requested by the Town, Compass Construction has reduced the Construction Staging Area in the Market Square by half, thereby increasing the number of public parking spaces.

CHANGE MANAGEMENT

Subcontractor Delay Claim

- Delay Claims with the Electrical, Window and Structural Steel Contractors have been resolved.
- Delay claims were submitted, and are still under review by the Consultants, for the following subcontracts: Hollow Metal Doors, Rolling Shutter, Flooring, Mechanical Equipment, and Door Hardware.
- Compass Construction has advised the project team that the Curtain Wall, Glazing, Aluminum Panel, Drywall, Elevator, & Roofing subcontractors have also made claims for compensation due to the schedule delays. Formal claims have not been submitted to the Project Team for review. The Project Team estimates a total maximum exposure of \$6,000 (recorded as Exposure in Appendix B Change Order Tracking Form).

Development & Infrastructure Services Report ES 2015-41 August 21, 2015 Page 3 of 5

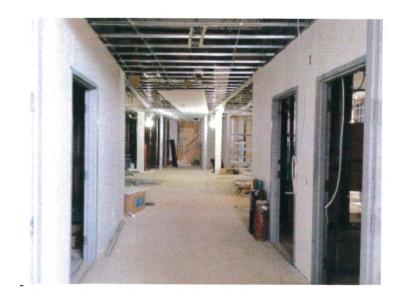

East Lane hard landscaping has commenced

Podium at south entrance is underway

Elevator installation has commenced, stair at reception installed

KEY COSTING/BUDGET ACTIVITIES

- To view:
 - o Total Project Budget Status as of August 7, 2015, please refer to Appendix A
 - Change Order Tracking Construction Contingency Form as of August 7, 2015, please refer to Appendix B
 - o Change Order Tracking- Cost Savings Form as of August 7, 2015, please see Appendix C
 - Fixtures, Furniture and Equipment Budget Tracking Form as of July 31, 2015, please refer to Appendix D
 - o Master Schedule Update, dated July 31, 2015, please refer to Appendix E
 - Compass Construction Project Schedule, Version 8.0, updated July 22, 2015, please see Appendix F

INTERNAL AUDIT REPORT

In response to a Council request, the CAO arranged for a peer review of the Old Town Hall renovation project's original foundation work to determine if sound industry standards had been followed. The Town retained the services of the York Region Audit Services Department in 2014 for a third party to conduct the independent Audit. The conclusion drawn by the Auditor was that good industry standards were followed and that the appropriate level of care and attention was taken by the Town. Please refer to Appendix G for the full Audit Report.

BUSINESS PLAN AND STRATEGIC PLAN LINKAGES

Well Equipped and Well Managed

• Provide efficient, effective and environmentally sound maintenance services to an appropriate level that achieves Council and/or Provincially mandated service levels, which meet public health and safety requirements and enhances quality of life while ensuring that system capital assets retain their value and are managed and funded according to sustainable, lifecycle based principles and practices.

Drywall and taping continue

Old Town Hall Renovation Project - Note to Audit Services Report

The Town of Newmarket has used the services of the York Region Audit Services department since 2005 to conduct peer reviews and audits of various Town processes/procedures. This is a resource shared by the N6 group of municipalities.

In 2014 in response to a Council request, the CAO arranged for a peer review of the Old Town Hall renovation project's original foundation work to determine if good industry standards had been followed.

Audit Services conducted the peer review through a third party engineering consultant and the initial draft report was submitted to staff. It was shared with the architect for comments and the final report (attached) was received in April, 2015.

The Old Town Hall Budget Control Task Force received the report at its meeting of May 11, 2015 and the report is now being included in the Task Force Update to Council.

Town Of Newmarket

Newmarket's Old Town Hall Renovation Project

Report

June 2014

1.0 Management Summary

We have carried out a review of Newmarket's Old Town Hall renovation project's original foundation work, undertaken prior to construction, to determine if good industry standards were followed in reviewing the original foundations and if the issues later discovered during construction could have been identified.

Conclusion

Based on the findings from our review, it is our opinion, that good industry standards were followed in reviewing the original foundations and that a key factor that prevented the participants, during the design phase of the project, to identify issues later discovered during construction, was the extent and location of the structural testing.

The decision to limit testing to one exterior test pit together with the designated location of the pit, we believe, impacted the original conclusions reached regarding the integrity of the foundations. In hindsight and with the knowledge gained during the construction phase, had additional investigative measures been employed, they may have had an effect on the discovery of issues with the structural integrity of the foundations during the design phase of the project.

However, we believe that an appropriate level of care/attention that would reasonably be expected, was taken in this situation by the participants in arriving at an opinion that "based on the interior and exterior reviews it was not indicative of further investigations at the time".

Note:

It should be noted that the costs to excavate additional exterior test pits would have been extensive. The costs would have included the installation and removal of shoring, plating over the pits to allow vehicle access, safety fencing, lighting, backfilling, reinstatement, etc.

We assume that the additional costs together with access restrictions would have been taken into consideration by the Town of Newmarket as to whether additional exterior test pits should be undertaken. The Town of Newmarket's decision to restrict the exterior pit to one location was apparently influenced by these added costs and access restrictions.

2.0 Introduction

In November 2008, the Town of Newmarket (Town) submitted an application for a Building Canada Fund Grant for the renovation and expansion of the Old Town Hall. The main premise of the application was to make the building accessible and to utilize the building as an Arts and Culture Centre. On February 12, 2009 the Federal Government announced approval of the application, with funding consisting of equal investments from the Federal and Provincial governments.

The building has been used for various purposes over the years, including a town market, municipal offices and police station including a jail and courthouse. The renovation project will include the incorporation of existing historical materials such as the jail cell steel partitions and salvaged beams.

When construction is completed, it will consist of the renovation of the existing 9000ft² building, constructed in 1890, and a 5600ft² addition. Community programming will comprise Arts and Cultural programs, meeting rooms, gallery display space, and large public and private functions.

Following approval of the Building Canada Fund grant in early 2009, the Town conducted an RFP and retained the services of Black and Moffat, a heritage architect to begin the design process. In September 2012, the Town then awarded a contract to Mettko for Project Management Services, who proceeded to be engaged in the prequalification and tendering phases together with the construction phase.

In 2013, the project for the renovations of the Old Town Hall was awarded to Compass Construction Resources Limited. During the renovations, as excavation of the foundations for underpinning and waterproofing commenced, issues with the structural integrity of the foundations became apparent. This resulted in a scope change to the project, with an additional \$1,400,000 being required for the project. The total capital cost for the project is \$10,590,172.

3.0 Objective and Scope

The objective of this review was to determine if good industry standards were followed in reviewing the original foundations and if the issues later discovered during construction could have been identified.

The scope of the review included:

- 1. A review of Tender Documents including Tender Forms, General Requirements and Specifications;
- 2. A review of the various Contracts;
- 3. A review of Architectural and Structural Drawings, the Geotechnical and other relevant reports;
- 4. Interviews with appropriate personnel, including the Architect, Structural Engineer, Project Manager and Town Management; and
- 5. A review of documents presented to Council regarding the project status.

Details of our observations/assessments and findings are contained in Section 4.0 of this report.

A draft copy of this report was shared with Black & Moffatt for any comments. Black & Moffatt had no comment.

We wish to thank Town of Newmarket Management and Project Consultants for their excellent co-operation and assistance in providing Audit Services with requested documentation and timely responses.

4.0 **Observations/Assessments and Findings**

Background

The project progressed in the standard manner of the design, tender and construction stages. An Architect (BMA) was hired, preliminary layouts prepared, budgets submitted and numerous designs for the renovations and an addition was submitted to Council for approval.

This process occurred over the period from June 2009 to December 2011 with consulting engineers now being involved and the project consequently progressed to the Tender stage in early 2012. The Structural Engineers, RJC and the Mechanical and Electrical Engineers Lam & Associates Ltd. were all involved during design and tendering phases as part of BMA's contract.

The Geotechnical Engineer, Soil Engineers Ltd. was awarded a separate contract and carried out their site investigation in October/November 2009.

Due to this being a Renovation to a Heritage Building Project and not a typical type of contract the Town would have experience in managing, it was recommended that a Project Management Company, familiar with this type of project, be hired. Consequently, MET was awarded a contract on September 28, 2012, by the Town and proceeded to be engaged in the Prequalification and Tendering phases together with the Construction phase.

Observations/Assessments

During our investigation, based on emails between BMA, RJC and the Town, it was confirmed that one exterior test pit, limited to one location, was authorized. This limitation by the Town was due to adjacent laneways and local traffic access restrictions around the building. Consequently only one exterior test pit was conducted together with interior pits and wall openings. They were reviewed, commented on and assessed by RJC.

In a July 29, 2013 Commissioner of Development and Infrastructure Services Report -2013-34, it indicated that "A series of six wall openings and three test pits, two interior and one exterior were performed by the Structural Engineers, Reed Jones Christofferson Ltd (RJC) in early October 2009. The condition of the foundation walls as reviewed from the interior were in fair condition and based on similar foundations works on similar renovation projects RJC was of the opinion that no further exterior investigations were required.

Page 3 of the Soils Report, Section 3 Field Work references "test pit and wall opening locations are shown on Drawing No 2". Drawing No 2 was included in the Soils Report. We noted that the report on the test pits and wall openings was not included in the Soils Report issued as part of the Tender Package. The reason for this omission was never ascertained and was not realized by BMA, RJC or MET.

The Elevation Drawings, showing the existing building, indicate "existing rubble foundations to be parged, waterproofed/insulation drainage board and weeping tile typically to be installed throughout". This indicated that the perimeter of the existing building would have had to be excavated to expose the existing rubble foundation walls other than just at areas to be underpinned. The Architectural drawings required the rubble foundations of the exterior perimeter of the old building to be "parged.....& weeping tile" to be installed. This would require the existing face of the rubble foundations to be cleaned prior to the parging. Depending on the cleaning method this possibly could have had a detrimental effect on mortar deterioration and the stability of portions of the wall, as dislodgement of stones and mortar could occur.

We ascertained from our review that two interior test pits and one exterior test pit together with six wall openings were carried out. In the Soils Report, Drawing #2 (included in the request for quote), four interior test pits were indicated. It should be noted the wall openings were only cut through the interior skin walls to allow visual inspections of the rubble foundation walls behind the skin walls. No openings were cut in the rubble walls. The report for the pits and wall openings was prepared in sketches with written remarks imprinted on the sketches.

Noted in these sketches were remarks as to the status of the rubble foundation walls at those locations. Particular extracts from these sketches are as follows:

- TP#1 & WO#2 Rubble stone foundation wall, areas where no mortar in joints.
- WO#3, #4, #5, #6 (East Wall) Rubble stone foundation wall, some joints in better condition than others.
- TP#2 Benching appears to have settled.
- TP#2 (wrong Location) Exterior Test Pit Deteriorated mortar joints.

The building was worked on by the Town's in house building maintenance / construction crew for an opening in 1980 and was used up until the last couple of years when it was closed due to mould and the impending project. Part of the reason for it being designated as a historical building was that it had been built on a "random granite rubble foundation". The rubble foundation wall subsequently because of the new additions and renovation had to be underpinned at various locations and possibly could be considered as an important consequence in not having the condition of the rubble wall fully investigated.

The wall openings in the skin walls indicated some mortar joints in the interior face of the rubble wall were in better condition than others. Indicated in the accompanying written notes, applicable to the areas observed through the openings, it was assumed this condition to be uniform throughout the basement area. The confirmation of the condition of the mortar in the core of the wall, as to possible deterioration, was never achieved. A number of cores would have been helpful in indicating the strengths and/or weaknesses of the wall.

The location of the exterior test pit, as designated by the Town, turned out not to be representative of the entire structural condition of the building as it was in an area where work had been carried out in a previous 1980 addition & renovation. This location indicated a wall that in essence appeared in fair condition with only mortar missing from some joints. Unfortunately the exterior condition of the rubble wall, encountered in the test pit, was taken as being uniform throughout the perimeter of the existing building.

In our opinion the interior test pits were not excavated deep enough to ascertain the condition of the rubble walls below the existing slab on grade. We arrived at this conclusion, based on our review of the sketches, as the sketches did not have any written notes pertaining to the condition of the walls below the slab on grade.

It should be noted that items were included in the Tender Documents for low pressure grouting to accommodate wall areas that may require stabilization to permit underpinning to take place. Items for additional mortar pointing also were included. This indicates that some allowances had been considered by the consultants for the possibility of some deterioration of the rubble foundation wall.

Findings

The decision to limit testing to one exterior test pit together with the designated location of the pit impacted on the original conclusions reached regarding the integrity of the foundations. Based on these limitations and test results it appears that the structural engineers, Reed Jones Christoffersen, deemed it reasonable to assume the inspection report on this area would be uniform throughout.

Drawings and reports of the Old Town Hall 1980's Renovations and Addition were not available for review and/or reference. Had these been available, they would have identified that the test location was not representative of the entire structural condition of the building as it was in an area where work had been carried out in a previous 1980 addition & renovation.

In hindsight and with the knowledge gained during the construction phase, had additional investigative measures been employed, they may have had an effect on the discovery of issues with the structural integrity of the foundations during the design phase of the project. These included:

- The visual observations from the "wall openings" indicated the interior face of the rubble wall was in fair condition. This only applied to the areas above the slab on grade. The investigation of the portion of the wall below the slab on grade was incomplete. Had this been fully investigated this may have had an impact on the design requirements pertaining to the underpinning of the rubble wall foundations; and
- It may have been reasonable to expect that further investigation of the wall should have been considered particularly in the areas of underpinning. However this would have had to be done from the interior of the building and may not have produced the results that additional exterior test pits would have shown.

Additionally, due to an oversight, the report for the Test Pits and Wall Openings was not issued with the Tender Documents. If included this could have generated questions from the Tenderers that possibly may have initiated further investigations prior to the closing of the Tender.

Appendix

Documents Reviewed

The list of documents reviewed is as follows:

- Tender Documents including Tender Forms, General Requirements and Specifications.
- Architectural and Structural Drawings.
- Addenda #1 #6.
- Geotechnical Report.
- Town Of Newmarket contract with Architect, Black and Moffat.
- Town Of Newmarket contract with Project Manager, Mettko.
- Town Of Newmarket contract with Contractor, Compass Construction Resources Ltd. (CMRL).
- Project Manager's Reports Nos. 1 12.
- Site Meeting Reports CMRL.
- Contract Change Orders.
- Binder- Old Town Hall Renovation Design Task Force as of May 2012.
- Binder- Old Town Hall Heritage Renovation Project.

Meetings

The list of interviewees is as follows:

- Architect: Black and Moffat
- Project Manager: Mettko
- Structural Engineers: Reed Jones Christoffersen
- Town of Newmarket Engineering Services
